

ABSTRACT

The invention relates to a dispenser of sheets stacked inside a compartment, such as a vertical one, with a dispensing slot and provided with means for slowing the advance of the stack of sheets. This dispenser is characterized in that such means are represented by flexible elements mounted so as to project into the compartment, elements on which the sheets rest. In one embodiment the flexible elements are made up of fibers and form brushes. The elements may also be in the form of flexible blades or that of the coils of a spring.
